

These 3 photos show examples of an Emerald Ash Borer infestation. The Emerald Ash Borer is here in the Akron-Newstead area. If you see these signs on your Ash trees you have 3 options: 1. Treating the tree may help it survive. 2. Cutting the tree down and burning the wood destroys some beetles and slows the spreading to other trees. 3. Of course, you may do nothing and infested trees will die and fall on their own, probably on some inconvenient spot. Please see our other ash borer information sheets on our website for more information. If you see these signs in your trees please contact the Town Clerk's office at 542-4573 and report it as we are trying to track the infestation progress and its locations. Thank you for your assistance!
